

Overview

The State of California has earned a national reputation for its demographic program. The Demographic Research Unit is designated to represent the state in national programs relating to population statistics: Federal-State Cooperative Program for Population Projections and Estimates, and The Census Data Center Program.

Legislation created the Demographic Research Unit within the Department of Finance in 1951 to serve as the single official source of demographic data for State planning and budgeting. Population data are used to establish appropriation limitations; distribute subvention funds, various federal program funds, wastewater treatment funds, and other State funds; allocate capital outlay funds; and aid in the planning and evaluation of programs. State agencies and departments, local governments, the federal government, school districts, public utilities, the private sector, and the public use the unit's demographic data.

Unit staff provides demographic research and analysis, produces current population estimates and future projections of population and school enrollment, and disseminates census data.

THE DEPARTMENT OF FINANCE

Census

The State Data Center (SDC) was established on January 1, 1979, to serve as the central point for dissemination of census data to State and local government agencies and the general public in California. The SDC program is a national effort by the U.S. Census Bureau designed to increase and improve public access to census statistical products.

The SDC provides services in processing machine-readable data, user consultation, data analysis, and user training workshops upon request. The SDC library houses a broad spectrum of data sources including the 1970, 1980, and 1990, and 2000 decennial censuses, the Census of Agriculture, the Economic Censuses, and several special and periodic surveys.

The SDC network is composed of 5 regional centers and 36 affiliate centers throughout the state. Working with the SDC, the regional and affiliate centers provide products and services to the 58 California counties. To obtain a complete listing of the SDC network, visit our website at www.dof.ca.gov and select Demographic, Economic, and Financial Research > Other Data and Resources.

Estimates

Annual population estimates of the State, counties, and cities are provided by the Demographic Research Unit. Information on housing units, vacancies, average household size, components of population change, migration, and special populations are also available. The data are used in determining the annual appropriations limit for all California jurisdictions, to distribute State subventions to cities and counties, to comply with various State codes, and for research and planning purposes by federal, State and local agencies, the academic community, and the private sector.

Estimates Publications

- *January 1 City and County Population and Housing Estimates*
- *January 1 Population Ranking of Cities/Counties*
- *July 1 County Population Estimates*
- *State Population Estimates with Components of Change 1940–present*

Projections

The Unit forecasts both population and public school enrollment. Population projections are made for the State and the counties for 50 years into the future with age, sex and race/ethnic detail. The enrollment forecasts have a 10-year outlook and are available at the county level for kindergarten through high school graduates. Post-secondary education enrollment is available on a statewide basis. As direct inputs to the State budget, the Unit biannually provides short-term statewide population and kindergarten through 12th grade Average Daily Attendance projections.

Demographers within the Unit are also available for consultation with other government agencies and the private sector.

Projections Publications

- *County Population Projections by Age/Sex and Race/Ethnicity Detail 1970–2050*
- *K–12 Enrollments*
- *Post-Secondary Enrollments*
